

Cell Culture Plate (6 Well)

(#30006/31006/32006)

1. Applications

Multiwell Plates have been widely used for handling different samples in single experiment during culture. SPL Life Sciences provides a wide option of multiwell plates from 4-well to 96-well plates. All of the multiwell plates were tested for cell culture. Optically clear high quality polymers were used during production. Sterile versions of multiwell plates are treated with Gamma irradiation after complete packaging to eliminate any chance for possible exposures to contamination sources. Surface treated or non-treated version can be selected for each multiwell plate depending on the experiments
